

Rapid House Panels

Westcon Precast Inc offers state of the art insulated wall panels sandwiched around high-R foam insulation for maximum efficiency and convenience. Our complete system of standard panels and floors are built and stocked ready to be used in your project. Our unique casting process makes panels that fulfill project needs and meet customers expectations without adding exterior topping or treatments like siding or stucco. Utilizing precast concrete results in improved quality, shortened construction schedules, and reduced waste as compared to conventional stick-built construction. The completed building will have the attractive visual appearance of any other quality-built structure, but the real difference is the added benefits of energy-efficiency, storm safety and long-term durability.

806 square feet

MAIN FLOOR PLAN

Fireproof • Durable • Tornado Resistant • Weather Resistant • Mold Resistant

Environmentally friendly, sustainable low carbon footprint. Precast buildings have gained a foothold in Alberta and Western Canada market. Precast concrete technology has proved its worth by saving a lot of time and money. Now with over 75 years experience, Westcon Precast is offering solutions with Rapid Housing Panels that have been widely tested in the worst conditions. High durability, quality assurance and rapid installation make it a premier choice for any new home project. Choose from our standard floor plan or talk to a Westcon Sales Representative today on how to make your next dream product come true.
